## Fixed Wireless Broadband

Boost your productivity with high-speed broadband that is **guaranteed 100% reliable**—because it's not dependent on another carrier's infrastructure.

eduroStream's fixed wireless broadband provides businesses with robust performance and proven reliability for demanding applications like high-speed internet access, Voice over IP (VoIP), video conferencing, video surveillance, and more. eduroStream's high performance and extremely low latency make these technologies efficient and cost-effective.

### Reliability

Symmetrical broadband connections backed by a **Service Level Agreement (SLA)** that guarantees 100% network uptime and protections on jitter, latency and packet loss.

### Security

Multiple layers of security, including over-the-air DES (Data Encryption Standard) and AES (Advanced Encryption Standard) with up to 256-bit encryption. Unlike traditional fiber and wireline carriers, Eduro's network is not vulnerable to major fiber and cable cuts.

### Productivity

Installation is guaranteed in **days**, not weeks or months. Eduro support technicians are available 24x7 and there is **no waiting on third party support providers** - we own the "last mile," so we respond to issues quickly and effectively.

### Affordability

Superior service that doesn't rely on telephone companies and is without the performance and cost issues of legacy networks—plus flat-rate monthly pricing on all eduroStream solutions—and no surcharges and taxes. Scalability with fixed costs lets you plan for growth in your network. There is never any equipment to buy.

### Enhanced User Experience

All eduroStream connections are delivered via Ethernet, minimizing equipment costs, and making it simple to connect directly to the customer's LAN.

---

### eduroStream Benefits

Eduro's carrier-grade fixed wireless network has been serving customers since 2003, offering reliable broadband that grows with your business.

---

### Benefits Include

- Speeds From 1.5M to 100M or more
  - Carrier-grade reliability
  - Exceptional Quality of Service (QoS)
  - On-Demand scalability
  - Rock-solid security
  - Realtime service
-
